

BMW AOS. Keep up to date. Save your time credits!

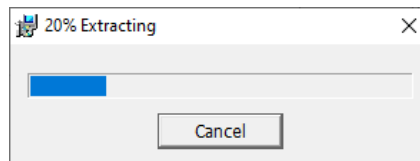

Program has to be up-to-date before starts. That Green Square May be misleading!

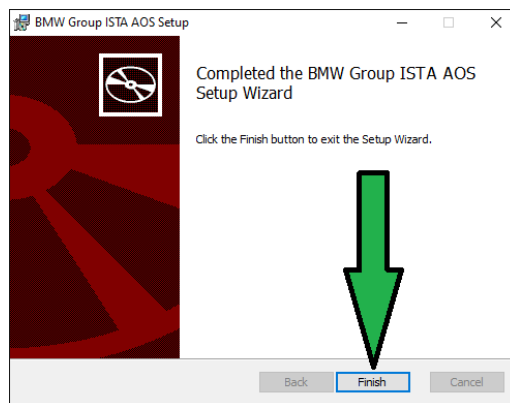

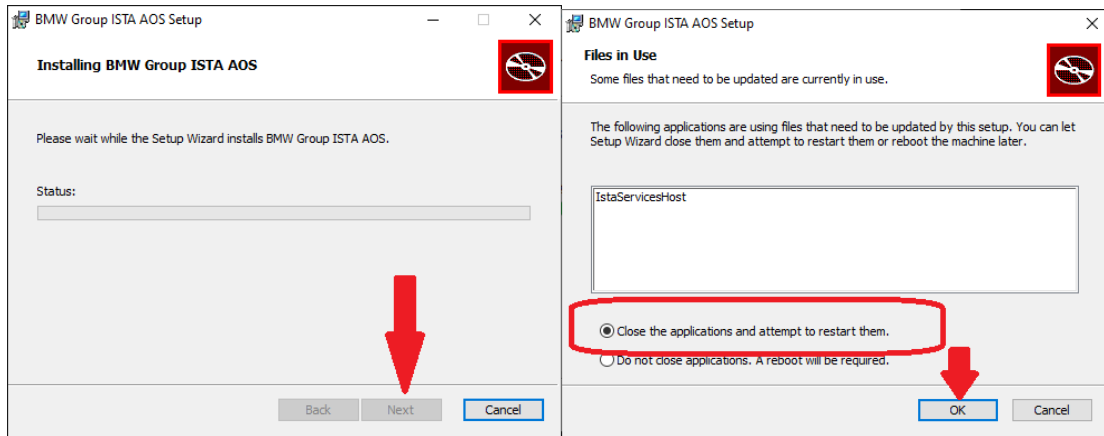

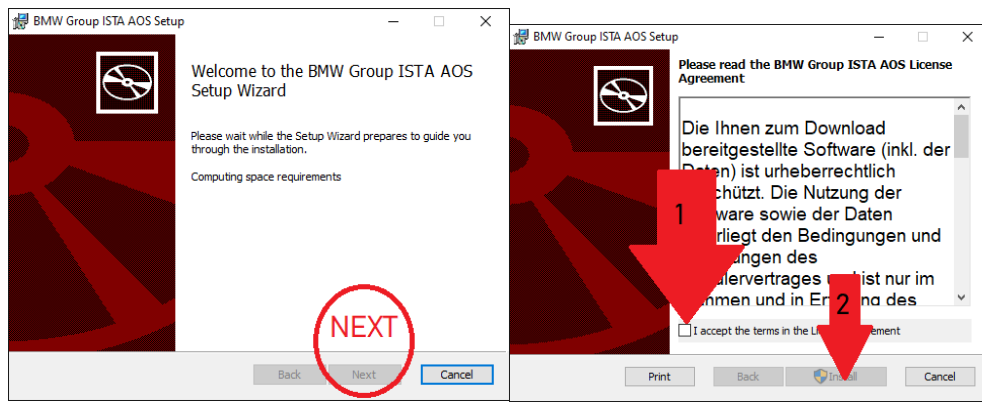

Updates are released more less twice a month.

Open website, and log in to your account.

Select "RUN" Program will start downloading. This may take up to an hour.

Main program has been updated. Reboot or download fresh programming data.

SECOND STAGE, Programming data.

Use of special tools and tightening torques, these must be used without fail to ensure the correct completion of repairs.

Hybrid cars and electric vehicles
Repair work on intrinsically safe high-voltage systems must only ever be carried out by specially-trained experts. Each hybrid car and electric vehicle requires additional vehicle-specific training with training achievement controls. Before work is started it is essential that the applicable safety information is read and noted. Work on live high-voltage components is expressly prohibited. Before every step that affects a high-voltage component, the high-voltage system must be de-energised and locked out against unauthorised start-up. If improperly used, there is the danger of resultant damage and the associated safety risks.

Hydrogen drive
Repair work on a Hydrogen 7 (E68) must only be carried out following consultation with the vehicle-specific customer representative (see Owners Handbook). If improperly used, there is the danger of resultant damage and the associated safety risks.
